Cue Production Study – 2006 – Evidence of Breeding Form

This form gives us information about whether each bird bred at your location or may have moved on to breed elsewhere. Please fill out one line in the table below for each bird monitored. Use the following codes to indicate the highest evidence for breeding obtained.

PN (Probable Non-breeder) - the individual or pair was seen for a few to several days but then was not seen again (searching for such individuals to confirm non-presence is extremely helpful to us).

PB (Probable Breeder) - singing males seen during >2 surveys or pair observed or courtship behavior observed

CB (Confirmed Breeder) - nest building observed or nest or fledgling found or adult observed bringing food to the location being monitored

Name: Prov\State: Nearest city or town:
